Bhavan's Campus, Munshi Nagar, Andheri (West), Mumbai-400058-India  
(Autonomous College Affiliated to University of Mumbai)

## Mid Semester Examination Synoptic

March 2018

Max. Marks: 30

Class: SE

Course Code: CE43/IT44

Name of the Course: Operating System Synoptic

Duration: 90 Minutes

Semester: IV

Branch: Computer/IT

Question No.		Max. Marks																																																									
Q.1 (A)	1023 new processes are created – 1 mark Formula -> $2^n-1$ where n is number of times fork() is called --- 1 mark	02																																																									
Q.1 (B)	Each service carries 1 mark	04																																																									
Q.2	<table border="1"><tr><td>P2</td><td>P1</td><td>P2</td><td>P1</td><td>P2</td><td>P0</td><td>P1</td><td>P2</td><td>P0</td><td>P1</td><td>P2</td></tr><tr><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td><td>11</td><td>12</td><td>13</td><td>14</td></tr></table> <p>Calculate the Turn Around Time (TAT) for each process as shown in the table below.</p> <p>TAT = Completion Time - Arrival Time</p> <table><tr><td colspan="5">-----</td></tr><tr><td>Proc</td><td>AT</td><td>BT</td><td>CT</td><td>TAT (CT-AT)</td></tr><tr><td colspan="5">-----</td></tr><tr><td>P0</td><td>0</td><td>2</td><td>12</td><td>12</td></tr><tr><td>P1</td><td>0</td><td>4</td><td>13</td><td>13</td></tr><tr><td>P2</td><td>0</td><td>6</td><td>14</td><td>14</td></tr><tr><td colspan="5">-----</td></tr></table> <p>Avg TAT = <math>(12+13+14)/3 = 13</math></p> <p>Waiting time for P0 =10 Waiting time for P1 =9 Waiting time for P2 =6 Average waiting time = <math>(10+9+6)/3=25/3=8.33</math> 1mark for correct Gantt chart</p>	P2	P1	P2	P1	P2	P0	P1	P2	P0	P1	P2	4	5	6	7	8	9	10	11	12	13	14	-----					Proc	AT	BT	CT	TAT (CT-AT)	-----					P0	0	2	12	12	P1	0	4	13	13	P2	0	6	14	14	-----					5
P2	P1	P2	P1	P2	P0	P1	P2	P0	P1	P2																																																	
4	5	6	7	8	9	10	11	12	13	14																																																	
-----																																																											
Proc	AT	BT	CT	TAT (CT-AT)																																																							
-----																																																											
P0	0	2	12	12																																																							
P1	0	4	13	13																																																							
P2	0	6	14	14																																																							
-----																																																											

Correct Waiting/Turn around time for each process – 0.5 marks so total 3 marks  
 0.5 marks for correct average waiting time  
 0.5 marks for correct turn around time

OR

Gantt Chart for Round robin scheduling

P1	P2	P1	P3	P4	P3	P4	P3	P3
30	50	70	100	130	160	170	200	210

Waiting time for P1 = 20

Waiting time for P2 = 10

Waiting time for P3 = 30+30+10 = 70

Waiting time for P4 = 40+30 = 70

Average waiting time =  $170/3 = 56.66$

Tat for P1 = 70

Tat for P2 = 30

Tat for P3 = 170

Tat for P4 = 110

Average TAT =  $380/3$

1 mark for correct Gantt chart

Correct Waiting/Turn around time for each process – 0.5 marks so total 3 marks

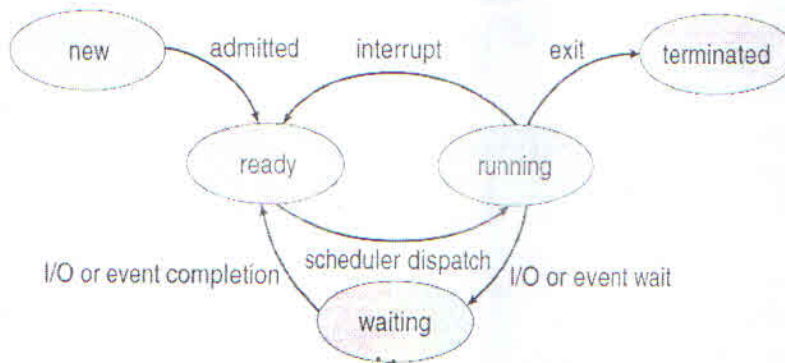

0.5 marks for correct average waiting time

0.5 marks for correct turn around time

Q.3

1 mark for correct diagram

5

4 marks for explaining all the states mentioned in the diagram.

Q.4

Need

Process	A	B	C	D
P1	2	1	0	1
P2	0	2	0	1
P3	0	1	4	0

A B C D

Work=available= 3 1 1 2

work= A B C D

P1=T, 4 3 3 3

P2=T, 5 3 6 6

P3=T, 6 5 7 6

Safe sequence &lt;p1,p2,p3&gt;

New allocation

Process	A	B	C	D
P1	1	2	2	1
P2	1	1	3	3
P3	1	2	1	0

Need

Process	A	B	C	D
P1	2	1	0	1
P2	0	1	0	1
P3	0	1	4	0

available=

A B C D

3 0 1 2

P1=F

P2=F

P3=F

System is in unsafe state.

Marks distribution→

Correct need matrix – 1 mark

Finding and writing any possible safe sequence – 2 marks

6

Q.5	<p>P value should be <math>\rightarrow \text{flag}[j] \ \&amp;\&amp; \ \text{turn} == j</math> --- 2 marks</p> <p>Explanation of following three points</p> <ol style="list-style-type: none"><li>1. Mutual exclusion is preserved. --- 1 mark</li><li>2. The progress requirement is satisfied. --- 1 mark</li><li>3. The bounded-waiting requirement is met. --- 1 mark</li></ol> <p style="text-align: center;">OR</p> <p>Explanation of 3 requirements for critical section problem- 3 marks</p> <p>Justification of the given scenario- 2 marks</p> <p>suppose p1 wants to enter into the critical section then it makes lock value as 0 to 1 now p1 is going into the critical section ,now if any higher priority process arrives then it will get critical section only if p1 leaves the critical section and makes lock value 0, it always follow atomic value into the critical section due to it is the problem of TSL..!</p>			5																			
Q.6	<table><tr><td></td><td>Monitor</td><td>Semaphore</td></tr><tr><td>Basic</td><td>ADT</td><td>int var</td></tr><tr><td>Action</td><td>Shared var and procedure operate on those</td><td>Values indicates no of shared resources available</td></tr><tr><td>Access</td><td>Through procedures</td><td>Wait(s) Signal(s)</td></tr><tr><td>Condition var</td><td>Present</td><td>absent</td></tr><tr><td>Wait operation</td><td>When wait statement is executed it always block the process.</td><td>When process executes p operation, it does not necessarily block that process because counting semaphore may be grater than 1.</td></tr><tr><td>ME and synchronization</td><td>Monitor construct itself enforces mutual exclusion.</td><td>ME and synchronization are responsibility of programmer.</td></tr></table>		Monitor	Semaphore	Basic	ADT	int var	Action	Shared var and procedure operate on those	Values indicates no of shared resources available	Access	Through procedures	Wait(s) Signal(s)	Condition var	Present	absent	Wait operation	When wait statement is executed it always block the process.	When process executes p operation, it does not necessarily block that process because counting semaphore may be grater than 1.	ME and synchronization	Monitor construct itself enforces mutual exclusion.	ME and synchronization are responsibility of programmer.	3
	Monitor	Semaphore																					
Basic	ADT	int var																					
Action	Shared var and procedure operate on those	Values indicates no of shared resources available																					
Access	Through procedures	Wait(s) Signal(s)																					
Condition var	Present	absent																					
Wait operation	When wait statement is executed it always block the process.	When process executes p operation, it does not necessarily block that process because counting semaphore may be grater than 1.																					
ME and synchronization	Monitor construct itself enforces mutual exclusion.	ME and synchronization are responsibility of programmer.																					
Any 3 differences- 3 marks
